PROFILE

Senior Frontend Engineer with 7+ years building production React and Next.js applications across SaaS portals, bilingual corporate platforms, and e-commerce. Strong in component architecture, web performance, accessibility, and translating Figma into production UI, with full-stack range across Node/Express and Django REST. Builds and ships bilingual Arabic/English (RTL) products end to end, from design system to deployment.

EXPERIENCE

Senior Frontend Engineer

Oct 2023 – Present

Future Cities for Engineering Consultations (FCEC) · Riyadh, Saudi Arabia

- Lead frontend across the company's digital portfolio — internal business platforms and a suite of public, bilingual (Arabic/English) web properties — owning architecture, shared component systems, and production deployment on Vercel with custom DNS.
- Shipped six production web properties (bilingual corporate sites, a portfolio platform, and a Shopify storefront) while sustaining Lighthouse scores of 85–89 Performance, 88–95 Accessibility, 92–100 SEO, and 96–100 Best Practices through code-splitting, image optimization, and deferred third-party scripts.
- Delivered two data-driven platforms end to end — frontend, REST API, persistence, authentication, and transactional email — including role-based access control and a secured admin console for a review committee.
- Extended the stack into React Native (CLI) for cross-platform delivery: list virtualization, stack navigation, form validation, and search/filter, targeting Android.

Frontend Developer

Apr 2023 – Sep 2023

KreativStorm · Berlin, Germany (Remote)

- Engineered responsive React + ES6 interfaces consuming REST APIs across multiple client projects.
- Converted Figma and Adobe XD designs into reusable React components for a shared component library.
- Applied technical SEO (semantic HTML, metadata, structured data, sitemaps) and mobile-first responsive layouts.

Frontend Developer

Jul 2021 – Feb 2023

Crewlogix · Lahore, Pakistan

- Built and deployed custom Shopify themes in Liquid alongside React-based client interfaces across multiple stores.
- Integrated third-party Shopify apps and custom Liquid sections — product filters, review widgets, and conversion-focused landing pages.
- Worked in agile sprints with designers and backend engineers; contributed to code reviews and PR workflows.

Junior Web Developer

May 2015 – Oct 2018

TEXOL · Dammam, Saudi Arabia

- Built and maintained corporate websites in HTML5/CSS3/JavaScript, handling cross-browser and legacy support.
- Integrated CMS workflows and managed content updates, maintenance, and deployment across client sites.

SELECTED PROJECTS

Bilingual awards & nomination platform — full-stack

Next.js 16 · React 19 · TypeScript · Tailwind · Express · MongoDB Atlas · Heroku

- Built a bilingual (Arabic/English, full RTL) public application with no-flash language hydration and polymorphic nomination forms — individual and organization, self-entry and third-party referral — with dynamic, file-backed achievement entries.
- Designed the upload pipeline on GridFS in MongoDB Atlas: multipart uploads with MIME allow-listing and size limits, streamed back through an authenticated admin API and attached to notification emails.
- Implemented a dependency-free auth layer — HMAC-SHA256 signed session tokens with constant-time verification and TTL expiry, a typed fetch client with bearer auth and 401 auto-redirect — behind an admin console with search, date-range filters, and styled multi-sheet Excel export.

Enterprise HR & operations platform

React · Node.js · Django REST Framework · PostgreSQL · JWT

- Architected a role-based access-control layer with granular per-feature permissions driving personalized dashboards, leave management, document-expiry tracking, and internal messaging.
- Engineered a multi-stage budget-approval workflow engine (finance → executive) with version history, audit trails, auto-generated serial numbers, expense tracking with overage protection, and typed sub-items for renewals, insurance, and business travel.
- Secured the API with JWT access/refresh-token rotation, custom permission classes, file-upload validation, and role-scoped query filtering.

Bilingual knowledge web app with an AI assistant

Next.js (App Router) · TypeScript · Server-Sent Events · RAG

- Integrated a retrieval-augmented AI assistant via a same-origin backend-for-frontend route that proxies to the model service, keeping the API key server-side and streaming answers to the browser over SSE, token by token.
- Built dynamic content routes (per-item detail pages and a browsable library), audio playback, and programmatic SEO — dynamic sitemap and robots generation, Open Graph metadata, and WebP-optimized media — in a shareable, deep-linkable bilingual experience.

Pixel-faithful marketing site from Figma — design-system build

Next.js 16 (App Router, Turbopack) · TypeScript (strict) · Tailwind v4

- Reconstructed a full marketing site 1:1 from Figma across five breakpoints (320–1920) with a hand-built component system — shared primitives and a content-driven data layer, no UI framework — defaulting to React Server Components and opting into client code only where interaction required it.
- Shipped fully static output with next/image and next/font for near-zero layout shift, class-based dark mode with pre-paint theming (no flash) via useSyncExternalStore, and WCAG AA compliance — semantic landmarks, skip-to-content, focus-visible, ARIA state, and prefers-reduced-motion across all IntersectionObserver scroll animations.

Bilingual campaign microsite — motion + internationalization

Next.js 14 · TypeScript · next-intl · Framer Motion

- Implemented locale-routed i18n (Arabic default and English, full RTL) with middleware-based redirects and a content-driven architecture that separates copy from layout.
- Drove interaction with Framer Motion (anchored pulses, panel transitions) and an interactive SVG map, encoding selection state in the URL so every view is a shareable permalink, with static fallbacks for prefers-reduced-motion.

TECHNICAL SKILLS

Core (daily): React.js, Next.js (App Router), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Responsive / mobile-first, Figma-to-code, REST APIs, Git

Shipped to production: Node.js, Express, Django REST Framework, MongoDB, PostgreSQL, JWT & custom auth, i18n / RTL (Arabic), Accessibility (WCAG AA), Framer Motion, Shopify Liquid, Vercel, Heroku

Familiar: React Native (CLI), SSE streaming & RAG / AI-assistant integration, Wix

Tools: VS Code, GitHub, Postman, Chrome DevTools, Lighthouse

EDUCATION

MS, Computer Science — Universiti Kuala Lumpur, Malaysia 2019 – 2021

BSc, Electrical Engineering — University of Engineering and Technology, Taxila, Pakistan 2010 – 2014

CERTIFICATIONS

- Advanced React — Meta
- HTML, CSS, and JavaScript for Web Developers — Johns Hopkins University
- JavaScript Algorithms and Data Structures — freeCodeCamp
- Frontend Development (Hands-on Program) — KreativStorm
- Responsive Web Design — freeCodeCamp
